

Unsticking Stuck Round

A stuck round in your M16-series rifle or M4A1 carbine can stick you if you're not careful. If you hear an unusual pop while firing...or if you have reduced recoil...or if your rifle or carbine fails to chamber a new round...**STOP FIRING! WAIT!**

You may have a round stuck in the weapon's bore. Here's the drill for checking out your weapon:

Find a stuck bullet? Leave it alone. Your armorer removes stuck bullets. No bullet? Then you have a spent casing that didn't eject. Use the cleaning rod to poke out the casing.
